Comments:

The initial RFP included 13 evaluations to be completed by the consultant to assess the condition and remaining useful life of various assets at the plant. At the time, any recommendations from these evaluations were intended to be included in future capital projects. However, after these evaluations were completed, it was determined that a number of the plant processes were in critical condition and should be replaced now to avoid catastrophic failure. These processes include the aeration system, ventilation system, and the secondary clarifier system. Unfortunately, the secondary clarifier system did sustain a catastrophic failure which resulted in a number of SPDES permit violations and is currently being replaced under an emergency contract. The additional funding being requested now is needed to replace the approximately \$4,000,000 of budget being used for the emergency repair and includes an additional approximately \$3,500,000 of funding for the repairs deemed critical by the evaluations in order to avoid other failures.
